Technical Bulletin January 2007

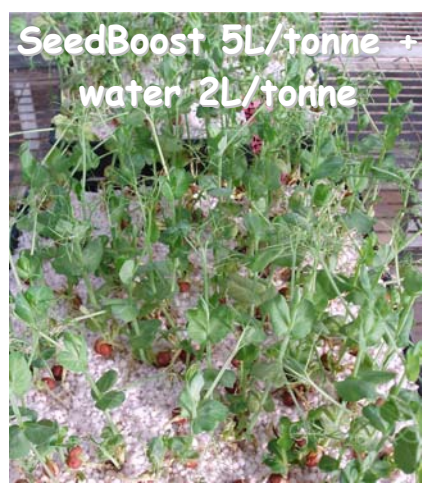

Crop Quality and Yield Enhancement Starts With the Seed

SeedBoost™ is an easy to use, liquid seed dressing with high nutrient analysis and root growth stimulants. The larger and stronger root biomass of the young seedlings promoted by **SeedBoost™** increases their survival rate by improving nutrient uptake during the critical early growth stages. Increased levels of nutrients and growth regulators in grains have a positive effect on germination and crop yield.

For Quick Start Up and Early Root Growth

- ☀ Increases nutrient levels in seed
- ☀ Improves seed quality and germination
- ☀ Boosts early root growth and vigour
- ☀ Improves seed resistance to moisture stress

The snow peas in the trial were grown in a nutrient deficient medium. The improvement in the growth is only due to the **SeedBoost™** application.

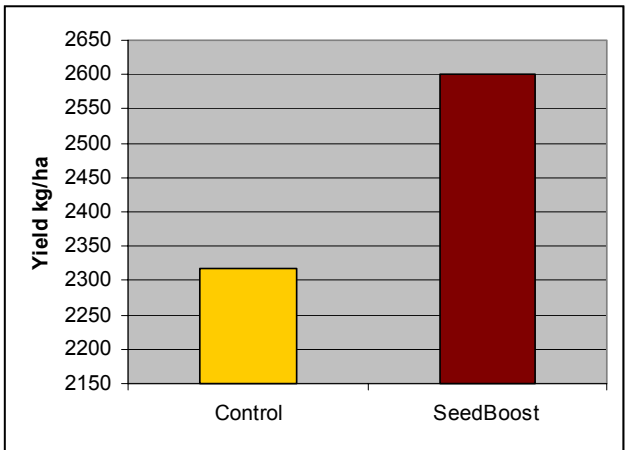

Wheat trials in WA using **SeedBoost™** at 5 litres per tonne of seed. Yield measurements were taken over various soil types. The graph shows an average 12% increase in yield with the use of **SeedBoost™**.

Control **SeedBoost™**

The grower achieved an increased revenue of \$60 per hectare for an additional input cost of only \$1.60 per hectare.
