Technical Bulletin May 2006

Outstanding Results with NUTRIOLOGY™

A commercial tomato grower in Bundaberg, Queensland has achieved outstanding results using the Omnia **NUTRIOLOGY™** system.

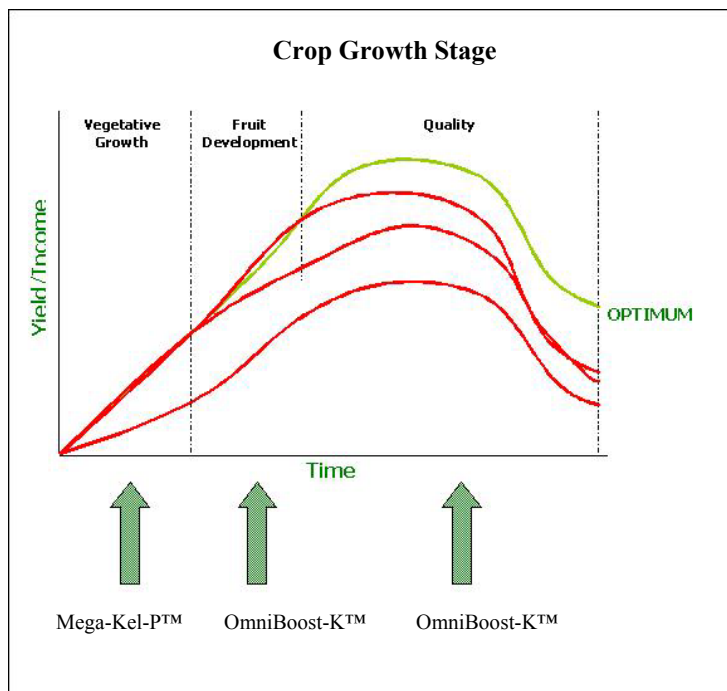

The system shapes nutrient needs based on the plant's physiology and **OMNISAP™** results.

The fertigation program was supplemented by weekly foliar application of **Mega-Kel-P™** and **FoliCal19™** with **OmniBoost-K™** as per the graph below. **K-humate™** was applied at planting and again 3 weeks later.

Yield increased from 60 tonne/hectare to 90 tonne/hectare of packed tomatoes.

When a fertigation program is not shaped, yields can be less than 50% of a plant's potential. Shaping allows for changes in plant physiology.

Providing the correct nutrient and application rate at the right time optimizes growth and quality. Following the Omnia **NUTRIOLOGY™** approach has a massive impact on profit.
