

Organic Solutions for Growth

Omnia Specialities Australia Pty Ltd

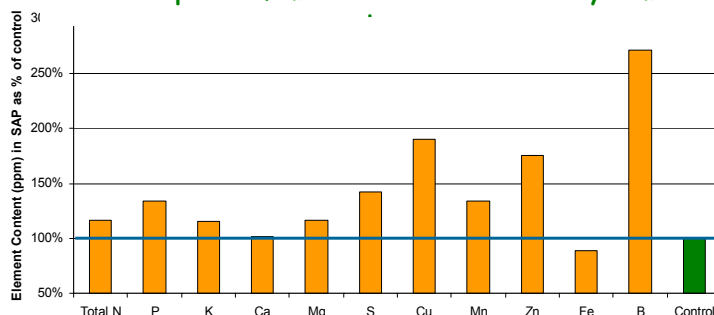

Technical Bulletin October 2006

Are you optimising nutrient uptake?

Like the saying goes, "You are what you eat". Similarly, the well being of plants depends not only on what you feed your plants, but also on the availability of nutrients in your applied fertilizers and on how successfully the plants take up these nutrients through their root system and foliar.

K-Humate™ applied at 20 l/ha resulted in an increase in the uptake of most essential nutrients by tomato

The foliar application of a micronutrient solution with 2% K-fulvate (v/v) increased the micronutrient concentration of tomato plant shoots as compared to the control.

Improve the uptake of essential nutrients by your crops with Omnia's *K-humate™*, *K-fulvate™*, *Mega Kel-P™* and *Iron Fulvate™*.

Concentrated Liquid Soil Conditioner

For better root growth and a more balanced plant nutrition

- Improves soil moisture and nutrient retention
- Reduces nutrient lockup in the soil
- Improves nutrient uptake by roots

Liquid Nutrient Booster

For improved plant nutrition and crop quality

- Improves the foliar uptake of a wide range of liquid nutrients
- Provides organic chelation of micro-nutrients

Liquid Fertilizer and Growth Stimulant

Formulated to improve nutrient uptake of essential nutrients and crop quality

- Promotes vigorous root and plant growth
- Enhances cell division for better crop quality
- Improves fruit set for greater crop yield

Organically Chelate Iron

Formulated with organic chelates for quick plant uptake

- Suitable for foliar application and fertigation
- Reduces the likelihood of leaf burn
- Effective in correcting iron deficiencies
